OUR PRINCIPLES

TAKE DESIGN SERIOUSLY

The systems we create fit a purpose that is guided by techniques and domain driven design. We avoid over engineering and favor simplicity above all else.

CODE REVIEW

To ensure quality 100% reviewing of the production code is key. Our developers see code reviewing not as a 'tick box' exercise, but a real chance to spot potential issues

AUTOMATE RELEASES

Delivery practices are done by creating an expansion from developing to testing and then to production. The ability to release often and with confidence gives significant benefits. We often help our clients improve their development infrastructure and processes.

CONTINUOUS INTEGRATION AND AUTOMATION

The emergence of microservices, micro-components & applications tend to be composed of numerous integrated parts. Automation of deployment and testing is key to being productive.
